Day 2-3 Weather Hazards

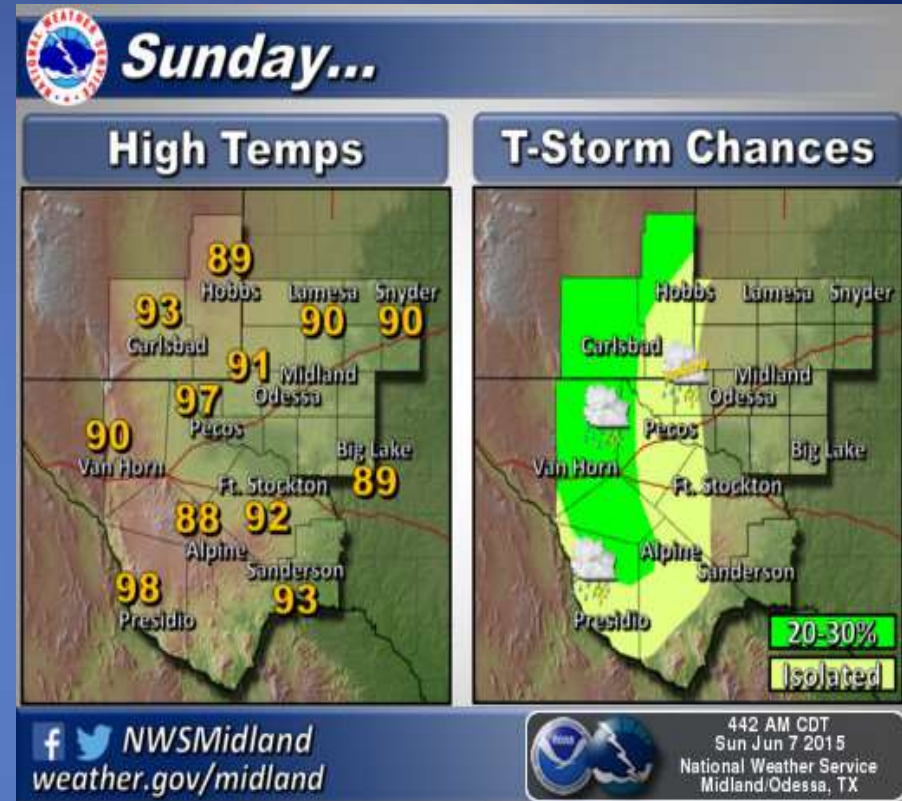

Valid: 0800 Mon - 0800 Wed

Hazardous Weather

An increase in clouds today signals the arrival of tropical moisture originating off of Hurricane Blana in the Eastern Pacific Ocean near the Baja. West to southwest winds will push seasonably warm air into southern New Mexico and west Texas today but there will be sufficient moisture to produce a few mainly afternoon and early evening showers and thunderstorms. High temperatures will be from the mid 80s to lower 90s lowlands with mostly upper 60s to upper 70s mountains.

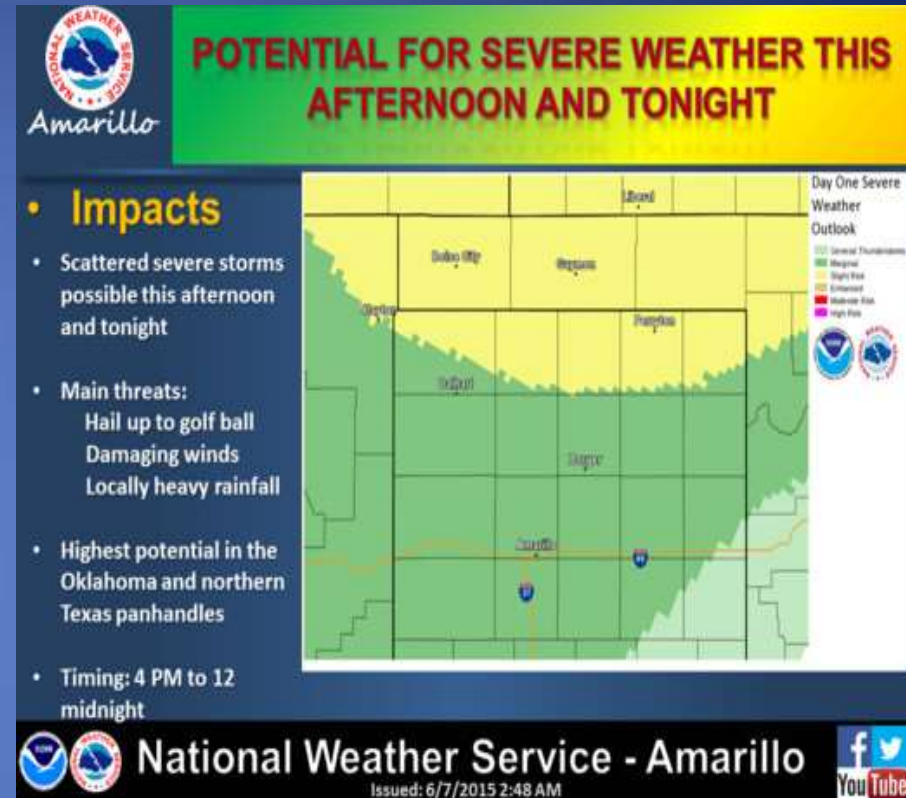

Thunderstorms are possible this afternoon and evening generally across higher terrain and the immediately adjacent plains. Any storm that develops will be capable of producing gusty wind, small hail, and brief heavy rainfall.

Hazardous Weather

Thunderstorm chances will bend further east today as an upper ridge that has kept us warm and dry gradually weakens and shifts southward. The best chance of storms will be across the northwestern and western portions of the South Plains region this afternoon and evening. A few of these storms could become severe and produce quarter size hail and wind gusts to 60 mph. Temperatures will peak in the upper 80s and lower 90s.

Thunderstorm chances will increase late this afternoon through early this week across most of the area. Isolated severe storms are possible late this afternoon and evening and again Monday afternoon and evening. The primary threats will be hail up to golf ball size and damaging wind gusts up to 70 mph.

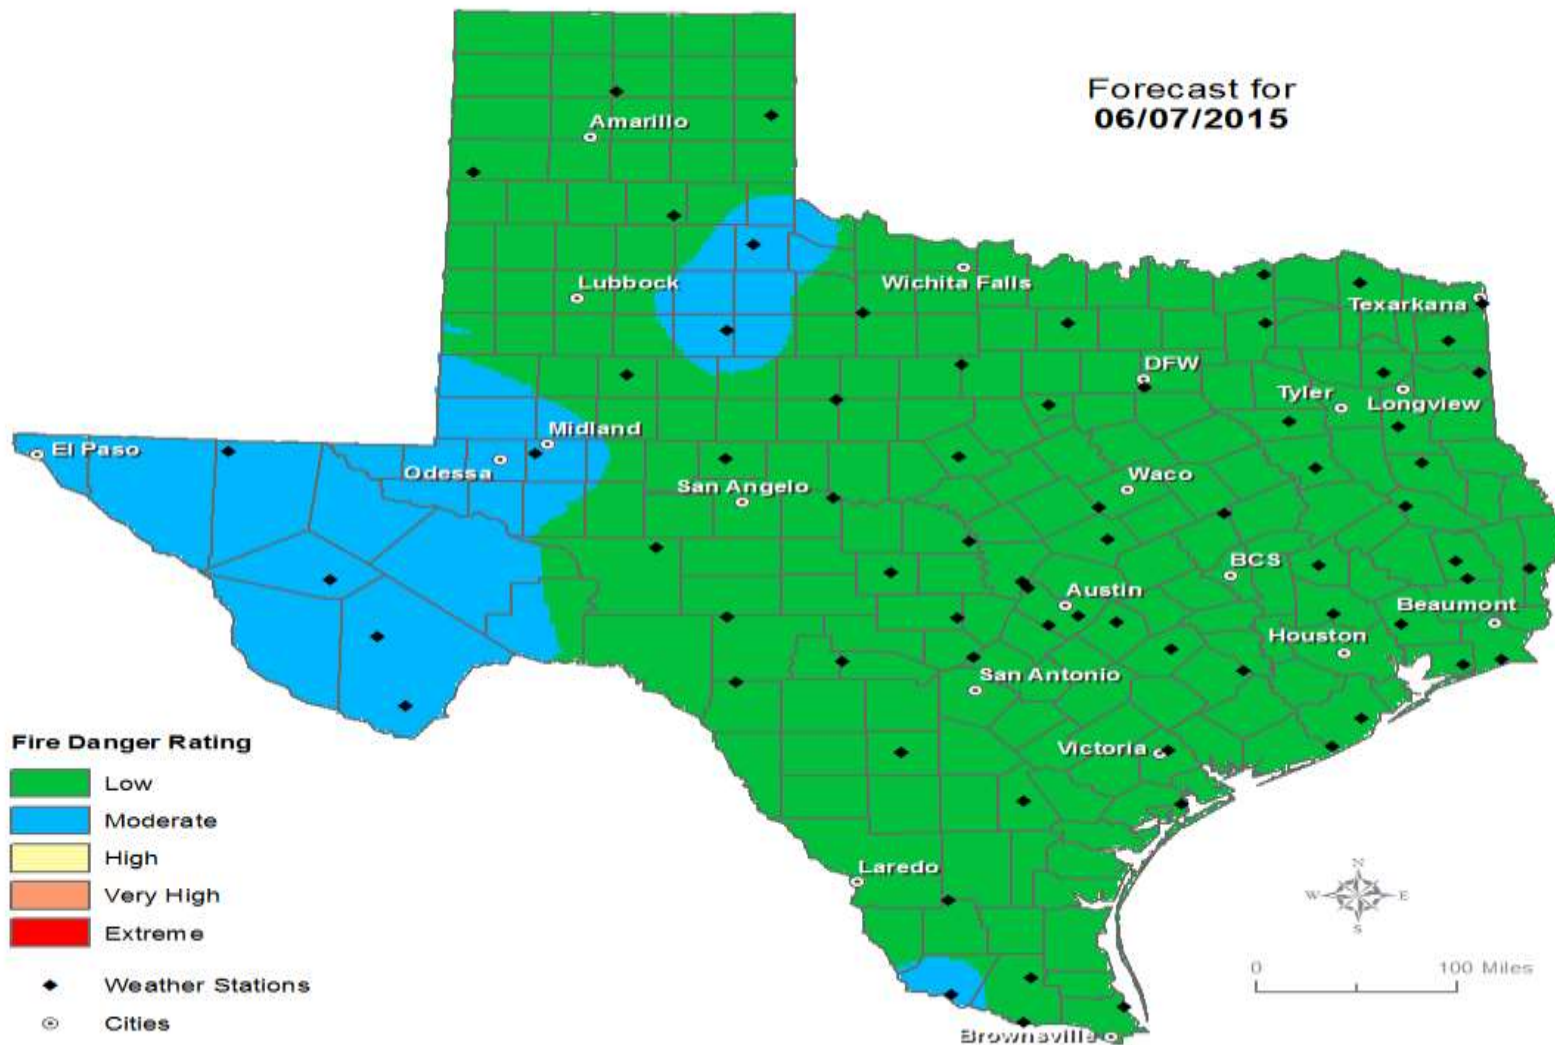

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
06/06/15	Significant Weather Advisory	Dallam, Deaf Smith, Hartley, Moore, Oldham, and Sherman Counties
